PHIKELELANI GIDEON GUMBI

Computer Science Student

Bergville, KwaZulu-Natal · 078 008 2317 · lelanigumbi2004@gmail.com · Github: YGlelani

PROFILE

Computer Science student at Tshwane University of Technology with practical experience in developing, deploying and maintaining software applications. Currently completing Work Integrated Learning at the Data Science Academy, where I contribute to building and deploying a tender intelligence platform. I am also developing a management system for IkusasaLentsha NPO. I have experience using AI-assisted development tools, solving problems, and learning new technologies. I am passionate about software development and building solutions that solve real-world problems.

EXPERIENCE

Work Integrated Learning (WIL) Student, Data Science Academy — August 2026 to January 2027

- Designed, developed, deployed and maintained a tender intelligence platform that automatically collects South African government tenders every 30 minutes.
- Developed independent services using Python and FastAPI, including web scraping, APIs, caching and AI-powered analysis.
- Used PostgreSQL for data storage and Redis for caching and improving API performance.
- Containerised and deployed 8 services using Docker on an Oracle Cloud ARM64 server.
- Implemented CI/CD pipelines using GitHub Actions and self-hosted runners.
- Integrated AI-powered tender analysis and business matching using Ollama and LangChain.
- Developed a web dashboard using HTML, CSS and JavaScript to display tender listings and details.

Volunteer and Systems Developer, IkusasaLentsha NPO — 2023 to Present

- Designing and developing an Organisation Management System using React, Node.js, PostgreSQL and Prisma to manage members, projects, events, meetings, finances and documents.

- Planned the system architecture, including database design, role-based access control and API structure before development.
- Developing the system in phases, focusing on functionality, security and maintainability.

PROJECTS

Tender Scraping Agent (WIL project) Python, FastAPI, Playwright, PostgreSQL, Redis, Ollama, LangChain, Docker, GitHub Actions. Automated scraping on a 30-minute cycle, cached API layer, AI analysis, and an agent endpoint, all deployed on cloud infrastructure.

IkusasaLentsha Organisation Management System (in progress) React, Vite, Node.js, Express, PostgreSQL, Prisma, JWT, Docker. Phased, security-conscious build with role-based access control and audit logging.

CERTIFICATIONS AND TRAINING

- FNB Academy 2025 — certified
- Microsoft Azure Data Fundamentals (DP-900) — coursework completed, exam not yet written
- Microsoft Azure AI Fundamentals (AI-901) — coursework completed, exam not yet written
- GitHub Actions — coursework completed, not certified

SKILLS

Technical: Python, Java, JavaScript, HTML, CSS, React, Node.js, FastAPI, REST APIs, SQL (PostgreSQL, MySQL), Redis, Docker, Git and GitHub, GitHub Actions (CI/CD), Oracle Cloud (deployment), Playwright (web scraping), LangChain, LLM integration (Ollama), AI-assisted development, MS Office

Professional: Ownership from design to deployment, breaking down ambiguous problems, written and verbal communication, teamwork and collaboration, time management and reliability, technical documentation, customer service

EDUCATION

Tshwane University of Technology — Diploma in Computer Science. Software development (Java, object-oriented design), database management and information systems. Currently completing Work Integrated Learning.

Amangwane High School — National Senior Certificate, completed 2022

INTERESTS

- Software and Mobile Application Development
- Data Analysis and Data Engineering
- Artificial Intelligence and AI Engineering
- Exploring and Learning New Technologies
